Welcome to the Ulster University
Faculty of Computing & Engineering
in partnership with QA Higher Education

Dear Student,

I am very pleased to welcome you to QA Higher Education and Ulster University. I hope that you have a very enjoyable and valuable time learning with us.

This Course Handbook links to the QAHE and Ulster sites with information about modules provided electronically on Blackboard Learn to give you information about your course. It outlines administrative procedures, assessment, regulations and module descriptions. You will need to refer to information provided in this handbook throughout your course.

If you encounter difficulties in any aspect of your studies, please do not hesitate to contact your Module Co-ordinator, your Studies Advisor or the Course Director.

The normal means of contacting you will be via your university-based email account. At various times, there will be need to contact you by post or telephone, so it is important that you keep your contact details up to date once you are enrolled on the course.

You are embarking on an amazing journey to fulfil your career and developmental goals in the field of Computing Technologies. This course will provide you with the solid grounding to pursue your aspirations from System Analyst to Mobile App developer.

I wish you well and every success in this innovative course.

Dr Ekereuke Udoh

Course Director

QAHE, Ulster University, London

1. INTRODUCTION

This Course Handbook is a resource for information about your course. Please note that any information given is subject to the Charter, Statutes and Regulations of the Ulster University. The Handbook does not replace other official University publications.

The content of this document is provided for the information of BSc Computing Systems students. It is accurate at the time of printing and may not reflect the changes made from time to time as deemed appropriate by the Ulster University in order to fulfill their role and mission or to accommodate circumstances beyond their control. Any such changes take precedence over the material presented here and may be implemented and effective when made without prior notice and without obligation.

The BSc Computing Systems course is an Ulster Faculty of Computing & Engineering based course and uses modules drawn from each school within the faculty (Engineering, Computing & Maths, Computing & Intelligent Systems, Computing & Information Engineering). The course is taught at the University's Jordanstown Campus as well as at the London campuses of QAHE.

It is your responsibility to retain this handbook for the duration of your course and beyond. It contains information, which you will require throughout your studies, as well as providing evidence of attainment levels and syllabus content.

2. LOCATION INFORMATION

The London campus location has learning and teaching facilities for your course. These include dedicated laboratories which you are encouraged to make full use of outside of your timetabled sessions. The London campus also has a library stocked with copies of core and recommended texts for the modules you are studying.
A guide to the technical support and use of the laboratories, including printing facilities is provided in the associated QAHE Student Guide to Computing Services. Library facilities are described in the QAHE Student Handbook.

3. COURSE INFORMATION

3.1. Induction

At the beginning of your course you will have a process of induction. Your course director will present core information about your course and you will be provided with appropriate introductions to various QAHE and university resources. One very important aspect of your life at university is the support offered by your personal tutor in the context of the University's Studies Advice process. Please be advised that you should know who your personal tutor is and you should know what the studies advice process is. This is a valuable service and you should avail of it to identify any issues or concerns you may have especially during your first days at university in an unfamiliar environment.

3.2. Programme Specification

The aims and objectives of your course, its structure, content, teaching, learning, assessment and feedback strategy are contained in this document as the Programme Specification.

3.3. Academic Calendar

Information on Academic Calendar/Registration/Enrolment/Examinations/ and Graduation is found at:
https://qa.ulster.ac.uk/courses/enrolment-information/

Timetable details can be accessed from the link below:
https://qa.ulster.ac.uk/courses/pre-arrival-information/

3.4. Course Structure Full Time (London)

Year	Semester	Level	Credit Value	Module Title	Code	Status Compulsory (C) / Optional (O)
1	QAHE (London) 1	4	20	Introduction to Databases	COM106	C
1	QAHE (London) 1	4	20	Problem Solving for Computing	COM161	C
1	QAHE (London) 1	4	20	Innovation and Society	COM188	C
1	QAHE (London) 2	4	20	Client Side Development	COM109	C
1	QAHE (London) 2	4	20	Mathematics for Computer Scientists	COM115	C
1	QAHE (London) 2	4	20	Introduction to Physical Computing	COM117	C
2	QAHE (London) 1	5	20	Systems Security	COM398	C
2	QAHE (London) 1	5	20	Programming in Practice	COM410	C
2	QAHE (London) 1	5	20	Software Product and Process Management	COM435	C
2	QAHE (London) 2	5	20	Computer Networking	CMP301	C
2	QAHE (London) 2	5	20	Data Analytics	CMP330	C
2	QAHE (London) 2	5	20	Server Side Development	COM431	C
3	QAHE (London) 1 & 2 & 3	5	60	Professional Practice - Computing	COM367	O
4	QAHE (London) 1	6	20	Full-Stack Strategies and Development	COM661	C
4	QAHE (London) 1	6	20	Cloud Native Development	COM682	C
4	QAHE (London) 1 & 2	6	40	Computing Project	COM668	C
4	QAHE (London) 2	6	20	Artificial Intelligence	COM671	C
4	QAHE (London) 2	6	20	Embedded Systems	COM686	C

Year 1

Module Code	CRN	Semester	Module	Level	Credit Value	Status: Mand (M) /Opt (O)

COM106	TBA	1	Introduction to Databases	4	20	M
COM161	TBA	1	Problem Solving for Computing	4	20	M
COM188	TBA	1	Innovation and Society	4	20	M
COM109	TBA	2	Client-Side Development	4	20	M
COM115	TBA	2	Mathematics for Computer Scientists	4	20	M
COM117	TBA	2	Introduction to Physical Computing	4	20	M

Year 2

Module Code	CRN	Semester	Module	Level	Credit Value	Status: Mand (M) /Opt (O)
COM398	TBA	1	Systems Security	5	20	M
COM410	TBA	1	Programming in Practice	5	20	M
COM435	TBA	1	Software Product and Process management	5	20	M
CMP301	TBA	2	Computer Networking	5	20	M
COM330	TBA	2	Data Analytics	5	20	M
COM431	TBA	2	Server-Side Development	5	20	M

* TBA (To be Announced)

Year 3 - Optional Placement Year (Effective from Sept 2018 intake)

Module Code	CRN	Semester	Module	Level	Credit Value	Status: Mand (M) /Opt (O)
COM367*	TBA	1/2	Professional Practice - Computing	5	60	O

* Students who successfully complete COM367 will be eligible to be awarded the Diploma in Professional Practice.

Year 3 or 4

Module Code	CRN	Semester	Module	Level	Credit Value	Status: Mand (M) /Opt (O)
COM661	TBA	1	Full-Stack Strategies and Development	6	20	M
COM682	TBA	1	Cloud native Development	6	20	M
COM671	TBA	2	Artificial Intelligence	6	20	M
COM683	TBA	2	Edge and Embedded Intelligence	6	20	M
COM668	TBA	1 & 2	Computing Project	6	40	M

3.5. Teaching Approach

Each module has a defined number of contact hours divided appropriately into various categories. Non-contact hours are also defined. Each module specification contains this information. Typically for a 20 credit point module, the total number of contact and non-contact hours is 200.

The teaching & learning methods deployed by a module are also contained in each module's specification. These include:

Lectures: presented to the students taking the module. Lectures address the major areas of the course, and include discussions of relevant examples, presentations of case studies, and contributions from guest speakers on occasion.

Small group sessions offer students the opportunity to participate in exercises and apply theory to real-world examples.

Practical lab-based sessions allow students to apply analytical skills and problem-solving skills to scenarios presented through the lectures. There is an opportunity to ask questions and consolidate course material.

BlackBoard Learn is used to support course modules, the delivery of material and sometimes assessment of content. Some modules may use additional web-sites to provide course content and information.

4. LEARNING IN HIGHER EDUCATION

The University expects that you will attend all classes of all types, making full use of the contact hours that are provided in your course. It is also expected that the effort hours that you contribute within a module are equivalent to those expected. The total hours effort, defined for all given modules, is based on experience with students and is the necessary effort hours needed to satisfactorily complete the module.

The University expects that you will meet any deadlines set for the submission of coursework assignments. These are fixed deadlines and should only ever be missed due to extenuating circumstances which should be presented to your course director using appropriate documentation (EC1 form). You will receive feedback on your submitted coursework assignments. You should read any feedback you receive and act on any advice presented within it so that this can inform any future effort you make in other work.

5. REGULATIONS FOR THE FULL-TIME BSc COMPUTING SYSTEMS COURSE

Numbers to these sections refer to those in the regulations document

1 TITLE *Bachelor of Science (with Honours) in Computing Systems*

2 MODE OF ATTENDANCE *Full-time*

3 DURATION *Normally 3 years full-time or 4 years with optional placement year*

4 LOCATION *London*

5 FACULTY *Computing & Engineering*

6 ADMISSION REQUIREMENTS

Applicants must:

(a) Satisfy the University's general entry requirements; or

(b) Provide evidence of their ability to undertake the programme through the accreditation of prior experiential learning.

7 EXEMPTIONS

7.1. The relevant Faculty may exempt individual students from part of a programme of study if they have satisfactorily pursued a previous programme of study of an appropriate nature and standard.

7.2. The Faculty may exempt candidates provided that they shall register as students for modules amounting to at least the final third of the credit value of the award at the highest level (and at least the final 50% of the credit value of the award at the highest level of the Cert HE, Adv Cert Adv Dip, Grad Cert, Grad Dip). The extent of the credit exempted must be recorded by the Board of Examiners

8 ATTENDANCE REQUIREMENTS

Students are expected to attend all classes associated with the programme and be punctual and regular in attendance.

A student who has not been in attendance for more than three days through illness or other cause must notify immediately the Course Director. The student shall state the reasons for the absence and whether it is likely to be prolonged. Where the absence is for a period of more than five working days, and is caused by illness which may affect their studies, the student shall provide appropriate medical certification in accordance with the General Regulations for Students.

Students who are absent without good cause for a substantial proportion of classes may be required to discontinue studies, in accordance with the General Regulations for Students and may contravene the requirements of their study visa.

9 RULES GOVERNING STUDENT CHOICE

Modules are offered as indicated in the table at section 3. Revisions may be made in accordance with the University's quality assurance procedures. Module availability may vary.

10 EXAMINATION AND ASSESSMENT

10.1. The performance of candidates shall be considered by the Board of Examiners in accordance with the University's regulations and guidelines.

10.2. Candidates will be assessed in the modules for which they are enrolled, in each year of study.

10.3. Candidates will be assessed according to the approved assessment methods and as outlined in the Curriculum Management System.

10.4. The pass mark for undergraduate modules is 40%. The pass mark at Level 7 for Integrated Master's is 50%. Where a module is assessed by both Coursework and Examination elements, students must achieve a minimum of 35% [45% for Level 7] in each, and an overall mark of 40% [50% for Level 7]. Where an element is assessed by a combination of individual components, a minimum mark in each component is not required, unless a PSRB requirement stipulates otherwise.

10.5. Where a PSRB mandates that each component of assessment must be passed in a module, this will be verified by the PSRB and it will be declared in the Programme Specification as follows:

> (a) Modules in which a minimum mark of 40% (level 7 50%) is required in each assessment component [of a specified element(s)].
>
> (b) Modules in which 40% (level 7 50%) is required to be achieved in specified assessment component only (with the specific component identified).

11 SUBMISSION OF COURSEWORK

Coursework shall be submitted by the dates specified by the Course Committee.

Students may seek prior consent from the Course Committee to submit coursework after the official deadline; such requests must be accompanied by a satisfactory explanation and in the case of illness by a medical certificate. This application shall be made to the Course Director using form EC1 available from Registry.

Coursework submitted without consent after the deadline shall not normally be accepted.

12 PROGRESS

A 'cohort semester' is determined by start month. Consequently 'cohort semester 1' could be equivalent to any of semesters 1, 2 or 3 in the traditional academic year.

Similarly, a 'cohort year' is determined by start date. A 'cohort year' might begin in May and would consist of three 'cohort semesters' inclusive of the resit period in 'cohort semester 3.

12.1. Candidates are required to pass all modules in each year of study in order to proceed to the next. The exception is where a Board of Examiners has granted permission for a student to trail failed credits into the next academic year. The modules affected will be assessed at the next opportunity where the assessment can be offered. Normally, students will be permitted to trail no more than 40 credits into the next academic year.

12.2. Progression from first semester to second semester is automatic.

13 CONSEQUENCES OF FAILURE

13.1. Students will be permitted to trail no more than 40 credits into the next academic year, normally without attendance for the trailed modules. Students are permitted a maximum of two attempts of resit/repeat assessment at each module at all levels.

13.2. Students in Year 0 taking the International Foundation Year or Integrated Foundation Year are not permitted to trail credits into Year 1 of their Undergraduate or Integrated Master's Programme.

13.3. The consequences of failure shall normally be as follows for all years:

FAILURE OF 0 - 80 CREDITS

A student who fails no more than 80 credits during any year of study will be permitted to resit the appropriate components or elements of modules at the earliest available opportunity. It may be necessary, in agreement with the programme delivery team, to schedule resit assessments across more than one assessment period, particularly where assessment volume is likely to be an issue.

FAILURE OF > 80-100 CREDITS

A student who fails more than 80 but no more than 100 credits during any year of study will repeat the failed modules, normally with attendance at the next available opportunity.

FAILURE OF > 100-120 CREDITS

A student who fails more than 100 credits within any year of study will be withdrawn from their studies. Those students will be advised that they are 'At Risk of Withdrawal' and will be considered at a 'At Risk of Withdrawal Board'.

14. CONDONEMENT

14.1. Up to a maximum of 40 credits from one Level, but no more than 60 credits in total across all levels may be condoned. When the maximum threshold of 60 credit points have been condoned, no further module condonements shall be permitted.

14.2. There must be evidence of satisfactory student performance. Student performance shall be deemed to be satisfactory if the average mark for the respective level of the programme is at least 40% (50% at Level 7). The Board of Examiners will need to balance possible effects of condonement on any assessments yet to be taken within that Level and judge whether the student is able to

demonstrate adequate performance from the modules assessed within the Level at the time.

14.3. The threshold for condonement shall be 5% below the pass mark for the module. Marks below the threshold may not be condoned. The mark obtained by the students shall be used by the Board of Examiners to calculate the overall level percentage and/or the degree classification. The student's transcript shall show that the module was condoned.

14.4. Some programmes may not permit condonement in specific modules as a result of PSRB standards, and these will be stated in the Programme Specification, as necessary.

15. AT RISK OF WITHDRAWAL ('AROW')

15.1. Students identified as AROW shall be notified in writing of their status and the reasons of such decision. The notification shall include information regarding the upcoming 'At Risk of Withdrawal' Board of Examiners where their case will be considered.
15.2. Students identified as AROW shall be provided with an opportunity to provide written representations to the Board of Examiners regarding their academic performance, extenuating circumstances and other relevant factors not previously known to the Board. Students will have five working days from the notification of the Board of Examiners decision to make their written representations. This is the opportunity for the student to make representations to the Board. Students are encouraged to bring forward relevant independent evidence where appropriate. The student representations should be concise, factual and focused on addressing the concerns raised from the initial notification.

15.3. All representations submitted by students considered as AROW shall be treated with confidentiality. The contents of representions shall only be disclosed to members of the Board of Examiners and other relevant University staff involved in the decision-making process.

15.4. Should a student fail to make representations, they will be withdrawn (with an exit award if appropriate).

15.5. The AROW Board retains the discretion to invite students deemed as AROW to make in-person representations during the Board meeting.

15.6. Following representations to the At Risk of Withdrawal Board, a decision will be taken as to whether the student should remain on their programme of study. The At Risk of Withdrawal Board will determine which modules should be retaken, whether they are deferred, resat or repeated. The Board may also consider whether the student should be granted a Leave of Absence, whether they should repeat or restart the level of study or whether they should be withdrawn from the programme.

15.7. Following the At Risk of Withdrawal Board of Examiners meeting, students at risk of withdrawal shall be notified in writing of the decision reached and the reasons for such decision.

15.8. If the decision results in withdrawal, the notification shall include information on the appeals process available to the student. The normal rights of appeal apply to the decisions of the At Risk of Withdrawal Board of Examiners, with seven working days allowed for such appeal after the notification of decision from the At Risk of Withdrawal Board of Examiners.

16. PROGRESSION ONTO DPP/DPPI/DIAS

Students will be permitted to trail no more than 40 credits into the DPP/DIAS/DPPI placement without attendance.

17. CONSEQUENCES OF FAILURE ON THE DPP/DPPI/DIAS

17.1. In circumstances where a student fails the DPP/DIAS/DPPI assessment they will be permitted to resubmit on two further occasions. The resubmitted work will be capped at 40%. Where there are extenuating circumstances submitted and accepted by a Board of Examiners an uncapped attempt will be permitted.

17.2. Should a student fail on their third and final attempt, they will be notified that they are at risk of withdrawal from the DPP/DIAS/DPPI stage of the programme. If the DPP/DIAS/DPPI is a compulsory stage of the programme, the student will be deemed to be at risk of withdrawal from their overall programme.

17.3. Students will be permitted to progress into the next academic year of the degree if the DPP/DIAS is an optional stage of the degree.

17.4. The Programme Specification will provide detail of the requirements for progression of students in those programmes where the DPP/DIAS is a compulsory section of the degree and where the DPP/DIAS must be passed before progression. Normally, failure of the DPP/DIAS in these programmes would result in a lower exit award where applicable.

18. CLASSIFICATION OF DEGREES

18.1. The overall degree classification for successful Bachelor's Degree candidates shall normally be based on the assessment results from all Level 5 and Level 6 modules. Normally, Level 5 modules will contribute 30% and Level 6 modules will contribute 70%. The weighting of each module's contribution to the overall mark shall be determined by the module's credit value.

18.2. For Integrated Master's degree candidates, Level 5 modules shall contribute 20%, Level 6 modules shall contribute 30% and Level 7 modules shall contribute 50%.

18.3. For students who are admitted with advanced standing, only Level 5 and 6 modules studied at the University shall be included in the final Honours degree result. For level 5 modules to be included in the final Honours degree result, a minimum of 60 credits at that level must have been achieved.

18.4. Deviations from the Regulations for Undergraduate and Integrated Master's Programmes mandated by PSRBs relating to classification of degrees will be listed in the Programme Specification and noted at the Board of Examiners

19. CLASSIFICATION OF FINAL RESULT (Undergraduate and Integrated Masters Degree)

19.1. The following percentages shall be used to determine candidates' overall Award Classification (subject to 18.2 above and those deemed eligible for promotion):

Class I	At least 70%
Class II (division i) (IIi)	At least 60% and less than 70%
Class II (division ii) (IIii)	At least 50% and less than 60%
Class III	At least 40% and less than 50%

19.2. All marks made available to students during the academic year are provisional until ratified by the relevant Board of Examiners. It should be made clear to students when releasing marks during the academic year that they are provisional and subject to ratification by the Board of Examiners.

20. ELIGIBILITY FOR PROMOTION TO THE NEXT CLASSIFICATION BAND (Bachelor's Degree and Integrated Masters Degree)

20.1. Where the overall marks of candidates are 0.5% or less below a degree classification boundary, the marks will be rounded up automatically to the higher classification.

20.2. Candidates who are 2.5% or less below a degree classification boundary and have 50% or more of the credits at their highest level that are in the higher degree classification boundary will be eligible for promotion to the higher classification.

21. AWARD OF DPP/DIAS/DPPI

21.1. To be eligible for the award of Diploma in Professional Practice or Diploma in International Academic Studies or Diploma in Professional Practice (International), candidates must have achieved an overall mark of at least 40% in the assessment. Where a candidate has completed the DPP, DIAS or DPPI successfully, this is awarded alongside their degree or relevant exit award.

21.2. The results of candidates shall be graded by order of merit as: Pass with Distinction, Pass with Commendation, and Pass. The following shall be the minimum percentages used in determining the overall gradings of candidates:

Pass with Distinction	70%
Pass with Commendation	60%
Pass	40%

22. EXIT AWARDS RELATING TO THE CREDIT FRAMEWORK

22.1. A student that has gained the requisite number of credits but who is unable, due to whatever reason, to complete their programme of study shall be considered for the award of Certificate of Higher Education or Associate Bachelor's Degree.

22.2. Certificate of Higher Education: In order to be eligible for a Certificate of Higher Education a student must have at least 120 credits with 90 credits or more at Level 4.

22.3. Associate Bachelor's Degree: In order to be eligible for an Associate Bachelor's Degree a student must have at least 240 credits with 100 at Level 5.

22.4. Classification of the Certificate of Higher Education and Associate Bachelor's Degree

Pass with Distinction	70%
Pass with Commendation	60%
Pass	40%

23. CLASSIFICATION OF EXIT AWARDS

23.1. Provided that candidates have not been exempted from modules amounting to 120 credit points at Level 6, candidates who do not satisfy the requirements for the award of the Integrated Master's Degree and have passed the requisite modules at Level 6 shall be assessed for the award of a Bachelor's degree with Honours.
23.2. Provided that they have not been exempted from modules amounting to more than 160 credit points, candidates who do not satisfy the requirements for the award of the Master's Degree or a Bachelor's Degree with Honours and have passed the requisite modules at Level 5 shall be assessed for the award of an Associate Bachelor's Degree.

23.3. Provided that they have not been exempted from modules amounting to more than 60 credit points at Level 4, candidates who do not satisfy the requirements for the award of the Master's Degree or a Bachelor's Degree with Honours or an Associate Bachelor's Degree and have passed the requisite modules at Level 4 shall be assessed for the award of a Certificate of Higher Education.

23.4. The assessment results from all modules at Level 6 shall contribute 70% to the overall grading of Bachelor's Degree with Honous and all modules at Level 5 shall contribute 30%; all modules at Level 5 shall determine the overall grading of the Associate Bachelor's Degree, and all modules at Level 4 shall determine the overall grading of the Certificate of Higher Education. The weighting of each module's contribution to the overall result shall be determined by the module's credit value.

23.5. The following shall be the minimum overall percentages used to determine the final gradings of candidates.

Bachelor's Degree with Honours	
Class I	At least 70%
Class II (division i) (IIi)	At least 60% and less than 70%
Class II (division ii) (IIii)	At least 50% and less than 60%
Class III	At least 40% and less than 50%
Associate Bachelor's Degree	
Pass with Distinction	70%
Pass with Commendation	60%
Pass	40%

Certificate of Higher Education	
Pass with Distinction	70%
Pass with Commendation	60%
Pass	40%

The provision for promotion to the next band, as outlined in section 22 will be applied for exit awards.

24. RE-ENROLMENT

A student who has been required to withdraw from a programme because of academic failure may be permitted to re-apply to that programme, subject to agreement by the appropriate Faculty, subject to the exemptions outlined in section 5.

25. TRANSFER BETWEEN PROGRAMMES

25.1. Students seeking to transfer programme must first obtain permission, in writing using the appropriate form, from the Course Director of the intended programme.

25.2. Students must inform their current Course Director of the intended transfer of programme, although there shall be no requirement for approval from the current department.

25.3. Before permission to transfer is given, both the student and the Course Director responsible for the programme to which they seek to transfer shall give due consideration to the student's ability to meet the admission criteria for the programme and/or requirements of that programme.

25.4. The effective transfer date shall be the later of:

i. the date on which Registry receives formal notification of transfer from the student.

ii. the date indicated on the transfer form.

25.5. Students wishing to transfer programme should visit the Ulster University Student Guide and view the information on Transferring Programme. Students should be aware of the financial implications of transferring programme and should be familiar with the Tuition Fee Liability Policy and should make an informed decision that does not impact their student loan.

26. LEAVE OF ABSENCE

26.1. Students should apply to take Leave of Absence from their studies where they are unable to participate adequately in their programme for reasons beyond their control, but they expect to be able to return to study within a limited timescale.

26.2. Leave of absence is an authorised temporary break from studies. In most cases leave of absence is granted for the period of one year and can be further extended

for a maximum period of another year (namely a second consecutive year). No additional period on a leave of absence can be permitted.

27. WITHDRAWAL FROM UNIVERSITY

27.1. Where a student withdraws from the University, it is that student's responsibility to inform Student Administration. Students must complete the specified online form and be cognisant of the Tuition Fee Liability Policy.

27.2. Students wishing to withdraw should contact their Course Director in the first instance.

27.3. The effective withdrawal date shall be the later of:

i. the date on which the Student Administration receives formal notification of withdrawal from the student;
ii. the last date of attendance.

28. WAIVERS OF REGULATIONS

Where there have been extenuating circumstances affecting a student after admission to the programme which could not reasonably have been foreseen at the time of admission and which operate to the detriment of the student, the Faculty may apply for a waiver of regulations from the Chair of the Academic Standards and Quality Enhancement Committee to:

a) waive any relevant part of the programme specification on such conditions as it may deem fit to the benefit of the student, or
b) recommend a waiver of any relevant part of the Regulations for Degrees, Honours Degrees and Integrated Master's Degrees on such conditions as it may deem fit to the benefit of the student.

29. AEGROTAT AWARDS

29.1. Where a candidate has been prevented by illness or other sufficient cause from taking or completing the final stage assessment or where their result was in the opinion of the board of examiners affected by illness or other sufficient cause, the Board of Examiners may recommend an Aegrotat award at the appropriate level.

29.2. An Aegrotat award shall be recommended only if the Board of Examiners is satisfied that the candidate would have qualified for the award had it not been for illness or other sufficient cause.

29.3. In order to reach its decision a Board of Examiners may assess the candidate by whatever means it considers appropriate.

29.4. Before an Aegrotat award is recommended a candidate must have signified that they are willing to accept such an award. Where they are not willing to do so,

the Board of Examiners shall recommend that they be permitted to complete, take or repeat the assessment in one or more modules by an approved subsequent date.

30. POSTHUMOUS AWARDS

A Board of Examiners can award a posthumous award, which may be classified/graded where the Board of Examiners has sufficient evidence from work already assessed to determine a likely overall result.

31. PUBLICATION OF RESULTS

31.1. In the case of those modules with marks, the results achieved in all assessed work, both by module and overall, and at all Levels of study, should be released to individual students in the form of a transcript detailing their own assessment results in the form of a percentage mark per module.

31.2. The University protects personal data in line with our Data Protection obligations. This includes the degree classification of a student which will not be disclosed into the public domain. Any final award, including the degree classification, will only be disclosed with the student's consent.

31.3. Students must read and abide by the Ulster University's GDPR policy: Staff and Student Responsibilities (ulster.ac.uk)

6. STUDIES ADVICE

You will be assigned a Studies Advisor with whom you are required to meet in accordance with university policy. These meetings are an important element of support for you in your life at university. Your Studies Advisor will offer you guidance on study and general university life and will assist you in understanding rules, regulations and expectations and with decisions made by examination boards with respect to your progress.

7. MODULE INFORMATION

The module specifications will contain more detailed module information and can be found at individual module area on Blackboard.

Theme Level	Semester 1			Semester 2		
	Programming	Information Infrastructures	Professional Skills	Applied AI	Physical Computing	Web Development
6	Full Stack Strategies & Development (COM661)	Cloud Native Development (COM682)	Computing Project (COM668)	Artificial Intelligence (COM671)	Embedded Systems (or Edge and Embedded Intelligence) (COM686 (or COM683))	Computing Project (COM668)
5	Professional Practice (Optional) (COM367)					
5	Programming in Practice (COM410)	Systems Security (COM398)	Software Product & Process Management (COM435)	Data Analytics (CMP330)	Computer Networking (CMP301)	Server Side Development (COM431)
4	Problem Solving for Computing (COM161)	Introduction to Databases (COM106)	Innovation & Society (COM188)	Mathematics for Computer Scientists (COM115)	Introduction to Physical Computing (COM117)	Client Side Development (COM109)

7.1. Level 4 Modules

Introduction to Databases

Organisations require skilled professionals to oversee the design and development of database management applications. This module introduces students to theoretical underpinnings of database management, database design, and the implementation of SQL statements to interact with a back-end database. Flexible and efficient storage and retrieval of large amounts of data are central to the functioning of modern information systems. This module is devoted to the study of the design, construction, and use of such databases.

Problem Solving for Computing

Computer programming is a fundamental skill expected of all computing graduates. This module frames programming within the context of computational problem solving, introducing students to key foundational coding concepts and common data structures via Python. Understanding is driven by lab activities with an appropriate emphasis on basic mathematical skills of logic, probability, iteration, data presentation and data manipulation. The subject matter addressed in this module provides a firm foundation for modules taken later in the programme.

Innovation and Society

Computer-related professionals need to be aware of a wider range of issues that go beyond the mere technical knowledge necessary to practice their chosen discipline. This module is designed to make future computing professionals who have the practical skills to cocreate innovative technological solutions to a problem

using design thinking tools and processes and be aware of and take into consideration the nature and implications of the legal, ethical, social and professional issues raised during any technological innovation.

Introduction to Physical Computing

Computer hardware, operating systems and architectures are key underlying elements for any computing student. These elements are combined together in the design and implementation of effective applications. Therefore, in order for a student to develop applications, a full understanding of these concepts, structures and mechanisms are required. This module presents a thorough review of fundamentals in physical computing, while relating them to current contemporary design considerations driven by current research. The practical component of the module will enable the student to build basic logical structures in hardware, while implementing operating systems software in Linux command line interface.

Mathematics for Computer Scientists

The study of computer science, and the use of computers to solve problems, requires an understanding of mathematics. For example, Boolean algebra is required for a description of logic circuits. Graph theory is used extensively in decision making problems. A knowledge of matrices, probability and statistics is necessary for solving problems in data science. This module provides an introduction to the core mathematics needed for the study of computer science at undergraduate level.

Client-Side Development

The World Wide Web that has been equivalent to the industrial revolution for the modern times. Client-Side Development assumes no prior experience in creating web pages and looks under the hood to the fundamental building blocks and how to create them.

7.2. Level 5 Modules

Systems Security

Computing systems are ubiquitous in both our work and personal lives. Reliance in society on computing systems can only be maintained through assurance of the integrity, sustainability, resilience and confidentiality of such systems. Consequently, the area of cyber security is a critical field with great relevance in computing and engineering. The module provides an understanding of the underlying systems which support the communication, storage and processing of information. The theoretical concepts covered are illustrated by considering their practical application in modern real-world solutions. This module engages students in security concerns and challenges in computing systems; covering security threats, attacks, risks and how to mitigate them. This is supported through a review of background concepts for security and the systems required to implement such measures. Further, it covers security architecture planning so that considerations for security risk assessment is taken into account and embedded in IT projects planning

and management.

Programming in Practice

Object oriented programming (OOP) approaches are widely embedded within the software development industry and are therefore an essential skill expected of computing graduates. Building upon concepts taught in Level 4 programming modules, this module will introduce students to the use of object-oriented techniques and abstract data structures in conjunction with associated algorithms. The module will also introduce professional practices for code management, security, testing, and deployment.

Software Product and Process Management

The module aims to enhance a student's ability to work as part of a software development team in the planning and delivery of a software product that meets business needs, and consequentially to enhance the student's employability through team working and acquisition of project and product management skills. In addition, it will enable students to gain an understanding and acquire a deeper appreciation for the bigger picture in relation to software development beyond the role of a single developer. Moreover, students will have the opportunity to gain practical experience of applying core aspects of a contemporary software development methodology within the context of a representative real-world business scenario. This will be realised by providing a contextualised theoretical grounding in contemporary software development methodologies which will be reinforced through modern approaches and supporting practices.

Computer Networking

In the era when the needs for networking capabilities continue to drive demand for more highly performing computing systems, the focus of this module is on the networks including components, topologies, architectures, functions, services, protocols, and standardisation. This module emphasises the technical and technological aspects of networking, configuration, design, maintenance and management of networks, and their deployment in real world applications.

Server-side Development

Server Side Development will make students aware of the technologies to support the development to production cycle used in industry to create robust online applications. This module will expand on students' knowledge and skills introduced in the started in the Client Side Development module and necessary for developing software systems to be deployed over the World Wide Web, with a specific focus on server-side technologies and techniques. It will also prepare a student for completing a substantial project.

Data Analytics

Data analytics and data science practices are fundamental to data driven and data informed industries. Data analytics is core to computing science and involves a

programmatic approach to exploratory data analysis and data mining as well as the use of machine learning to build highly predictive models. Before undertaking machine learning it is important for students to understand descriptive and inferential statistics as well as the grammar of visual analytics in order to understand patterns and associations in large datasets and for selecting the best combination of features for optimising predictive models and machine learning approaches

7.3. Placement Year Level 5 Module

Professional Practice - Computing

The purpose of this module is to provide undergraduate students with an opportunity to gain structured and professional work experience, in a work-based learning environment, as part of their planned programme of study at the University. This experience allows students to develop, refine and reflect on their key personal and professional skills. The placement normally takes place in Year 3 and is normally for a minimum duration of 25 weeks workbased learning. The placement opportunity should significantly support the development of the student's employability skills, preparation for final year and enhance their employability journey.

7.4. Level 6 Modules

Full-stack Strategies and Development

Full-Stack development is the phrase that has come to describe software developers who implement at all levels of the application; from the server-side business logic, through middleware that connects to other services such as databases; to the client-side presentation and layout of the page delivered to the user. This module introduces the students to the foundational concepts of full-stack software development, and provides experience in designing, building, and deploying such applications.

Cloud Native Development

Contemporary software development and deployment practices have evolved from traditional ones, relying on a variety of novel technologies and concepts. Traditional server infrastructure is supplanted by services offered by dynamic hosting provided by cloud providers such as Amazon Web Services, Google Cloud Platform and Microsoft Azure. Typical services offered are extensive and archetypally include comprehensive functionality including:

- serverless execution models
- compute services
- hosted database instances
- block/object storage

- data lakes
- static web hosting
- Application Program Interface endpoint hosting
- security services and identity management
- dynamic content routing
- machine learning and artificial intelligence services
- caching of content and computed outcomes

In addition to technical aspects of such modern solutions, there is an impact on the B4/79 May 2023 administrative, operational and accounting practices when compared with traditional development and deployment solutions. Through these services, solutions built upon them may react, shrink and grow at scale and on demand whilst reducing overhead and costs. These modern operational practices have shown to increase solution quality with a greater responsiveness to customer needs. This module serves as an introduction to these cloud platforms, related theory, their foundational concepts and operation models.

Computing Systems Project

The Computing Project provides an opportunity to draw together learning from across the course, and to allow students to evidence their mastery of the academic content and of its application through professional practice. Through the opportunity to devise, manage and evaluate all aspects of work in addressing a significant challenge, students can gain independence and a deeper appreciation of their practice within the broader subject area and of its relationship to wider society. These skills and the related knowledge are seen as essential by prospective employers, and provide a sound basis for further study and continued professional development.

Artificial Intelligence

Artificial intelligence (AI) is a field of computer science that studies what intelligence is and how to build intelligent machines. The central problems of AI include such traits as knowledge, reasoning, learning, planning, communication, perception and the ability to move and manipulate objects. These traits are the big ideas of AI and there are also an enormous number of open sources and tools used for developing AI solutions. AI has become an essential part of the technology industry, providing the heavy lifting for many of the most difficult decision making problems in computer science. Therefore, there is a need to provide students with the necessary knowledge and skills required to understand the fundamentals of AI, to solve real world problems more "intelligently", and ultimately to build intelligent artefacts. This module will introduce students to the fundamentals of AI with a focus on (1) the structures, resources and processes that together make up an intelligent agent; (2) the techniques, models and tools that can be used to simulate the "intelligent" processes; (3) the skills and capabilities necessary to critically review AI

literature and/or products; (4) an introduction to ways of thinking about how AI will and has impacted humans, and to ensure the AI-driven systems we build are beneficial and useful to human societies, and respect human values.

Edge and Embedded Intelligence

Edge and embedded intelligence are at the intersection of embedded Machine Learning (ML) applications, algorithms, hardware, and software. It differs from other applications of machine learning (e.g., server and cloud) in that it requires not only expertise in software, but also knowledge of embedded hardware. The module will focus on the basics of machine learning and deep learning, specifically for deployment in and embedded devices and systems, including microcontrollers and other constrained devices. Throughout the module, students will learn data science techniques for collecting data from sensor devices and develop an understanding of learning algorithms to train basic machine learning models which are optimised to run on resource constrained devices. At the end of this module, successful students will have a detailed understanding the principles behind embedded intelligence and the ability to develop and evaluate edge and embedded intelligence applications. This is a growing area for both industry and academic research. The module is aligned well with the research interest of the Pervasive Computing Research Center, within the School of Computing. The module is also aligned with the School's MSc provision in AI (Artificial Intelligence) and IoT (Internet of Things). It is envisaged that the content of this module may provide an opportunity to highlight options for continued taught postgraduate study and research.

8. HOW WORK WILL BE ASSESSED

You will receive information and feedback on your performance in coursework and examinations. You should note that marks and grades are subject to a process of moderation, which ensures their validity and reliability, and that no result is finalised until confirmed by the Board of Examiners.

Modules are assessed by either a combination of examination and coursework or by coursework only. In the case of the former, the module specification will detail the weighting to be used in calculating the overall module result. Assessment methods which contribute to your marks are known as summative assessment. Coursework and examinations are examples of summative assessment methods. You will receive feedback on coursework.

You may also receive feedback on other work that you do in a module in addition to the summative assessment you undertake. This is known as formative assessment and does not contribute to your marks but nonetheless will offer you valuable feedback. You will also have opportunities in tasks to assess your peers and indeed to assess yourself (these may be summative or formative in nature).

Summative assessment in examinations is conducted anonymously where your assessor does not know your identity during the marking of your examination paper. You should make yourself familiar with the regulations on the consequences of failure. Any student who fails to pass a module or modules of the course for any reason will receive the decision of the examination board by post. Your examination board will

meet to consider your results after you have completed each level of the course. For full-time students this is at the end of your second ‘cohort semester’.

ASSESSMENT CRITERIA – QUALITATIVE-BASED WORK

Level 4

Classification	% Range	Content	Application of Theory	Knowledge and Understanding	Evidence of Reading	Referencing and Bibliography	Presentation, Grammar and Spelling
I *[Outstanding Work]*	80 – 100	Excellent description and discussion of main issues and material with evidence of critical evaluation	Evidence of detailed, relevant application of theory, where applicable	Excellent knowledge and depth of understanding of principles and concepts	Evidence of reading a wide range of appropriate supplementary sources	Excellent referencing and bibliography	Excellent presentation, logically structured, using correct grammar and spelling
I *[Excellent Work]*	70 – 79	Detailed description of main issues and material with evidence of evaluation	Evidence of relevant application of theory, where applicable	Knowledge and depth of understanding of principles and concepts	Evidence of reading appropriate supplementary sources	Accurate referencing and bibliography	Good presentation logically structured, using correct grammar and spelling
II (i) *[Good Quality Work]*	60 – 69	Description of main issues and material with occasional evidence of discussion	Occasional relevant application of theory	Knowledge and sound understanding of the key principles and concepts	Evidence of directed reading and some supplementary sources	Appropriate referencing and bibliography	Orderly presentation, competently structured and acceptable grammar and spelling
II (ii) *[Acceptable Work]*	50 - 59	Description of main issues and material only	Limited evidence of relevant application of theory	Basic knowledge of the key principles and concepts only	Evidence of directed reading	Adequate referencing and bibliography	Adequate presentation and structure, acceptable grammar and spelling
III *[Adequate Work]*	40 – 49	Limited description of main issues and material only	Very limited evidence of relevant application of theory	Adequate knowledge of key principles and concepts only	Limited evidence of reading	Limited referencing and bibliography	Weak presentation and structure, acceptable grammar and spelling
Fail (marginal) *[Limited Work]*	35 – 39	Omission of some relevant material	Little or no evidence of relevant application of theory	Limited and or inconsistent knowledge and understanding of key principles and concepts	Evidence of minimal reading only	Inadequate referencing and bibliography	Poor presentation, structure, grammar and spelling
Fail *[Unacceptable Work]*	0 – 34	Insufficient and largely irrelevant material	No evidence of relevant application of theory	Little or no evidence of knowledge and understanding of the key principles and concepts	Little or no evidence of reading	Little or no referencing and bibliography	Unacceptable presentation, grammar and structure

ASSESSMENT CRITERIA – QUALITATIVE-BASED WORK

Level 5

Classification	% Range	Content	Application of Theory	Knowledge and Understanding	Evidence of Reading	Referencing and Bibliography	Presentation, Grammar and Spelling
I *[Outstanding Work]*	80 – 100	Extensive critical evaluation and synthesis of issues and material which includes original and reflective thinking	Evidence of detailed, relevant application of theory, and/or empirical results, where applicable	Excellent knowledge and depth of understanding of principles and concepts	Evidence of reading a wide range of supplementary sources	Excellent referencing and bibliography	Exceptional presentation, logically structured, using correct grammar and spelling
I *[Excellent Work]*	70 – 79	Some critical evaluation and synthesis of issues and material which includes some originality	Clear evidence of relevant application of theory and/or empirical results, where applicable	Comprehensive knowledge and depth of understanding of principles and concepts	Evidence of reading a range of supplementary sources	Comprehensive referencing and bibliography	Excellent, well directed presentation, logically structured, using correct grammar and spelling
II (i) *[Good Quality Work]*	60 – 69	Evaluation and synthesis of main issues and material	Appropriate application of theory and/or empirical results, where applicable	Knowledge and sound understanding of principles and concepts	Adequate evidence of reading supplementary sources	Appropriate referencing and bibliography	Good presentation logically structured, using correct grammar and spelling
II (ii) *[Acceptable Work]*	50 - 59	Accurate description of main issues and material with some evaluation	Occasional relevant application of theory and/or empirical results	Knowledge and understanding of key principles and concepts only	Evidence of directed reading and some supplementary sources	Adequate referencing and bibliography	Orderly presentation, competently structured and acceptable grammar and spelling
III *[Adequate Work]*	40 – 49	Description of main issues and material only	Limited evidence of relevant application of theory and/or empirical results	Basic knowledge and understanding of key principles and concepts only	Evidence of directed reading only	Limited referencing and bibliography	Weak presentation and structure, acceptable grammar and spelling
Fail (marginal) *[Limited Work]*	35 – 39	Omission of some relevant material	Very limited evidence of application of theory and/or empirical results	Limited and/or superficial knowledge and understanding of key principles and concepts	Evidence of minimal reading only	Inadequate referencing and bibliography	Poor presentation, structure, grammar and spelling
Fail *[Unacceptable Work]*	0 – 34	Insufficient and largely irrelevant material	No evidence of application of theory and/or empirical results	Little or no knowledge and understanding of key principles and concepts	Little or no evidence of reading	Little or no referencing and bibliography	Unacceptable presentation, structure, grammar and spelling

ASSESSMENT CRITERIA – QUALITATIVE-BASED WORK

Level 6

Classification	% Range	Content	Application of Theory	Knowledge and Understanding	Evidence of Reading	Referencing and Bibliography	Presentation, Grammar and Spelling
I *[Outstanding Work]*	80 – 100	Critical insightful evaluation and synthesis of issues and material which includes an original and reflective approach	Extensive evidence of relevant and perceptive application of theory, and/or empirical results, where applicable	Exceptional knowledge and in-depth understanding of principles and concepts	Extensive evidence of integrating appropriate supplementary sources	Outstanding referencing and bibliography	Outstanding, well-directed presentation, logically and coherently structured, using correct grammar and spelling
I *[Excellent Work]*	70 – 79	Critical evaluation and synthesis of issues and material which includes original and reflective thinking	Clear evidence of relevant application of theory, and/or empirical results, where applicable	Excellent knowledge and depth of understanding of principles and concepts	Evidence of extensive reading of supplementary sources	Excellent referencing and bibliography	Excellent, well-directed presentation, logically structured, using correct grammar and spelling
II (i) *[Good Quality Work]*	60 – 69	Critical evaluation and synthesis of issues and material	Evidence of relevant application of theory and/or empirical results, where applicable	Comprehensive knowledge and depth of understanding of principles and concepts	Evidence of reading a range of supplementary sources	Comprehensive referencing and bibliography	Good quality presentation, well structured, using correct grammar and spelling
II (ii) *[Acceptable Work]*	50 - 59	Accurate description of main issues and material, with some critical evaluation	Occasional relevant application of theory, and/or empirical results where applicable	Appropriate knowledge and understanding of principles and concepts	Evidence of reading directed reading and some supplementary sources	Adequate referencing and bibliography	Orderly presentation and structure with acceptable grammar and spelling
III *[Adequate Work]*	40 – 49	Limited evaluation and description of main issues and material	Limited evidence of relevant application of theory and/or empirical results	Basic knowledge of key principles and concepts only	Evidence of basic reading only	Limited referencing and bibliography	Acceptable presentation and structure, grammar and spelling
Fail (marginal) *[Limited Work]*	35 – 39	Omission of some relevant material	No evidence of relevant application of theory and/or empirical results	Limited and/or superficial knowledge of key principles and concepts	Minimal evidence of reading	Inadequate referencing and bibliography	Poor presentation and structure, grammar and spelling
Fail *[Unacceptable Work]*	0 – 34	Insufficient and largely irrelevant material	No evidence of application of theory and/or empirical results	Insufficient evidence of key principles and concepts	Little or no evidence of reading	Little or no referencing and bibliography	Inadequate presentation, structure, grammar and spelling

ASSESSMENT CRITERIA – QUANTITATIVE-BASED WORK

Level 4

Classification	% Range	Knowledge and Understanding	Problem Solving	Calculations	Analysis and Interpretation	Presentation of Work
I *[Outstanding Work]*	80 – 100	Substantial knowledge and clear understanding of major theories, principles and concepts	Able to identify more complex problems and competent in the modelling of standard problems	Clear demonstration of the steps taken, few errors in calculations, using recognised methods to formulate solution	Evidence of analysis and interpretation of new and seen data in conclusions derived	Very well directed presentation, logically structured
I *[Excellent Work]*	70 – 79	Evidence of knowledge and clear understanding of a range of theories, principles and concepts	Competent in the use of appropriate techniques to identify and model standard problems	Able to demonstrate the steps taken, errors in calculations, using recognised methods to formulate solutions	Reasonable evidence of analytical and interpretation in evaluating outcomes and deriving conclusions	Well directed presentation, logically structured
II (i) *[Good Quality Work]*	60 – 69	Knowledge and understanding of key theories, principles and concepts evident	Able to use appropriate techniques to identify and model standard problems	Errors in the steps taken in calculations, recognised methods used incorrectly	Some evidence of use of analytical and interpretative skills in evaluating outcomes and making judgements	Clearly presented, logically structured
II (ii) *[Acceptable Work]*	50 - 59	Knowledge and understanding of key theories, principles and concepts limited or inconsistent	Limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations lack clarity recognised methods not used or used incorrectly	Limited evidence of the use of analytical and interpretative skills	Competent presentation and structure
III *[Adequate Work]*	40 – 49	Knowledge and understanding of key theories, principles and concepts very limited	Very limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete, calculations largely incorrect, recognised methods not used or used incorrectly	Little evidence of analysis and/or incorrect interpretation	Poor presentation, and structure
Fail (marginal) *[Limited Work]*	35 – 39	Lack of knowledge and understanding of key theories, principles and concepts	Not able to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete or/and incorrect, recognised methods not used or used incorrectly	No analysis and/or interpretation	Very poor presentation and inadequate structure
Fail *[Unacceptable Work]*	0 – 34	No evidence of knowledge or understanding of key theories, principles and concepts	Does not use appropriate techniques to identify and model standard problems	Steps taken in calculations are incorrect, recognised methods not used or used incorrectly	No analysis and/or interpretation	Unacceptable presentation and structure

ASSESSMENT CRITERIA – QUANTITATIVE-BASED WORK

Level 5

Classification	% Range	Knowledge and Understanding	Problem Solving	Calculations	Analysis and Interpretation	Presentation of Work
I *[Outstanding Work]*	80 – 100	Comprehensive knowledge and clear understanding of major and complex theories, principles and concepts	Competent in both the identification and modelling of more complex problems	Applies appropriate techniques, and demonstrates innovation and creativity in formulating substantially correct solutions	Clear evidence of analysis and interpretation of new or abstract data and in conclusions derived	Excellent, well directed presentation, logically structured
I *[Excellent Work]*	70 – 79	Substantial knowledge and clear understanding of major theories, principles and concepts	Able to identify more complex problems and competent in the modelling of standard problems	Clear demonstration of the steps taken, few errors in calculations, using recognised methods to formulate solutions	Evidence of analysis and interpretation of new and seen data in conclusions derived	Well directed presentation, logically structured
II (i) *[Good Quality Work]*	60 – 69	Evidence of knowledge and clear understanding of a range of theories, principles and concepts	Competent in the use of appropriate techniques to identify and model standard problems	Able to demonstrate the steps taken, errors in calculations, not always using recognised methods to formulate solution	Reasonable evidence of analysis and interpretation in evaluating outcomes and deriving conclusions	Clearly presented, logically structured
I (ii) *[Acceptable Work]*	50 - 59	Knowledge and understanding of key theories, principles and concepts evident	Able to use appropriate techniques to identify and model standard problems	Errors in steps taken in calculations, recognised methods not used or used incorrectly	Some evidence of analytical and interpretative skills in evaluating outcomes and deriving conclusions	Neat presentation and structure
III *[Adequate Work]*	40 – 49	Knowledge and understanding of key theories, principles and concepts limited or inconsistent	Limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete or largely incorrect, recognised methods not used or used incorrectly	Very limited use or incorrect use of analytical and interpretative skills	Weak presentation and structure
Fail (marginal) *[Limited Work]*	35 – 39	Knowledge and understanding of key theories, principles and concepts very limited	Very limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete and incorrect recognised methods not used or used incorrectly	Little or no analysis and interpretation	Poor presentation and inadequate structure
Fail *[Unacceptable Work]*	0 – 34	Lack of knowledge and understanding of key theories principles and concepts	Not able to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete and incorrect recognised methods not used or used incorrectly	No analysis or interpretation	Unacceptable presentation and structure

ASSESSMENT CRITERIA – QUANTITATIVE-BASED WORK

Level 6

Classification	% Range	Knowledge and Understanding	Problem Solving	Calculations	Analysis and Interpretation	Presentation of Work
I *[Outstanding Work]*	80 – 100	Comprehensive depth of knowledge and clear understanding of major and complex theories, principles and concepts	Very competent in both the identification and modelling of more complex problems	Techniques are appropriately and effectively used demonstrating innovation and creativity in formulating substantially correct solutions	Evidence of excellent analysis and interpretation of new or abstract data and in conclusions derived	Excellent, well directed presentation, logically structured
I *[Excellent Work]*	70 – 79	Comprehensive knowledge and clear understanding of major and complex theories, principles and concepts	Competent in both the identification and modelling of more complex problems	Applies appropriate techniques, and demonstrates innovation and creativity in formulating mainly correct solutions	Clear evidence of analysis and interpretation of new or abstract data and in conclusions derived	Well directed presentation, logically structured
II (i) *[Good Quality Work]*	60 – 69	Substantial knowledge and clear understanding of major theories, principles and concepts	Able to identify more complex problems and competent in the modelling of standard problems	Clear demonstration of the steps taken few errors in calculations using recognised methods to formulate solution	Evidence of analysis and interpretation of new and seen data in conclusions derived	Clearly presented, logically structured
II (ii) *[Acceptable Work]*	50 - 59	Evidence of knowledge and clear understanding of a range of theories, principles and concepts	Competent in the use of appropriate techniques to identify and model standard problems	Able to demonstrate the steps taken, errors in calculations, may not always using recognised methods to formulate solution	Reasonable evidence of analysis and interpretation in evaluating outcomes and making judgements	Neat presentation and structure
III *[Adequate Work]*	40 – 49	Knowledge and understanding of key theories, principles and concepts limited or inconsistent	Able to use appropriate techniques to identify and model standard problems	Steps taken in calculations lack clarity, calculations have numerous errors, recognised methods not used or used incorrectly	Limited use of analytical and interpretative skills	Weak presentation and structure
Fail (marginal) *[Limited Work]*	35 – 39	Very limited knowledge and understanding of key theories, principles and concepts	Limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete or largely incorrect, recognised methods not used or used incorrectly	Little or no analysis and interpretation	Poor presentation and structure
Fail *[Unacceptable Work]*	0 – 34	Little or no evidence of knowledge and/or understanding of key theories, principles and concepts	Very limited ability to use appropriate techniques to identify and model standard problems	Steps taken in calculations are incomplete and incorrect, recognised methods not used or used incorrectly	No analysis or interpretation	Unacceptable presentation, and structure

9. ACADEMIC PRACTICE

Developing your approaches to communicating your ideas and work is key to your course. These will involve developing skills in communication and working practices and following standards of conduct concerning these. A specific example is ensuring that you avoid plagiarism.

Plagiarism

Plagiarism is the act of taking or copying someone else's work, including another student's, and presenting it as if it were your own. Typical plagiarists use ideas, texts, theories, data, created artistic artefacts or other material without acknowledgement so that the person considering this work is given the impression that what they have before them is the student's own original work when it is not. Plagiarism also occurs where a student's own previously published work is re-presented without being properly referenced. Plagiarism is a form of cheating and is dishonest.

Plagiarism Policy: In Student handbook: https://qa.ulster.ac.uk/student-support/student-guide/policies-procedures/

Student Declaration of Ownership …

When submitting coursework you will be required to sign the following declaration of ownership, which will appear on the coursework submission sheet:

"I declare that this is all my own work and does not contain unreferenced material copied from any other source. I have read the University's policy on plagiarism and understand the definition of plagiarism. If it is shown that material has been plagiarised, or I have otherwise attempted to obtain an unfair advantage for myself or others, I understand that I may face sanctions in accordance with the policies and procedures of the University. A mark of zero may be awarded and the reason for that mark will be recorded on my file."

Electronic Detection System

At the discretion of the module co-ordinator, coursework may be submitted to an electronic detection system in order to help ascertain if any plagiarised material is present. At enrolment you have given your consent to your work being submitted to electronic detection systems.

Plagiarism Offences

Should a member of staff suspect that your coursework contains plagiarised material, you may be asked to attend for interview to discuss the piece of work. A record of the meeting will be kept. You may also be required to undertake an oral examination on the content of your work. If plagiarism is found to have occurred, you will be penalised in accordance with the Framework of Penalties for Plagiarism Offences in Taught Programmes (look at the Course Handbook in your Blackboard Course Support area for the framework). A note will be placed on your file and the offence will be recorded on the central plagiarism register.

Framework of Plagiarism penalties: In Student Handbook:

https://qa.ulster.ac.uk/student-support/student-guide/policies-procedures/
Cheating and Plagiarism (ulster.ac.uk)

Copyright:

You should be aware of the limits on photocopying and scanning materials required by copyright law.

As an individual student what amount can I photocopy?
You should seek to observe the extent limits or so called "safe copying" limits of:

- *One article from an issue of a journal*
- *5% or a chapter from a work*
- *Under fair dealing you may only copy for yourself. You cannot make copies for other people.*
- *You may make only one copy of the same work.*
- *As a general rule you may not copy more than the so called "safe copying limits" from the same work at around the same time (i.e. you cannot copy one chapter from a work one day and a further chapter for the same work the next).*
- *Your copying should be for non-commercial research or private study purposes.*
- *You should acknowledge the source of your copy.*

Copyright Information: http://www.ulster.ac.uk/copyright.html#faqs

10. HEALTH AND SAFETY

Care for yourself and others is key in the workplace. This includes the computer laboratories. For further information see
https://qa.ulster.ac.uk/student-support/student-welfare/

Fire Evacuation and other health and safety guidelines are provided in the Information Pack. Health and Safety board located in the breakout area on the upper ground floor. Make sure to familiarize yourself with the Health and Safety information on these boards.

11. COURSE ORGANISATION

11.1. Course Committee

The Course Committee is responsible for the management, review and continuous reappraisal of the programme and generally consist of all teaching staff. It meets regularly and submits annual reports to the Faculty Board to recommend amendments necessary in the light of experience and other developments. Examination results are considered and approved by the Board of Examiners. The Course Director chairs the Course Committee and is responsible for the day-to-day administration of the programme. Student Representatives from the Staff/Student Consultative Committee are invited to attend Course Committee meetings for the unreserved business.

11.2. STAFF/STUDENT CONSULTATIVE COMMITTEE

A formal Staff / Student Consultative Committee will be established for each cohort of students, which will meet at least twice per year. Each member of the academic teaching on the programme, and all students on the programme, will be entitled to representation and to raise matters of concern to the programme. These meetings will be held during timetabled classes. The minutes of these meetings will form part of the business of the Course Committee.

Minutes of the Committee are discussed at the Course Committee meetings and by senior academic staff at the Annual Course Review.
Students will have the opportunity early on in the course to elect student representatives to attend these committee meetings. Student representatives will receive training to help them understand their role.

11.3. Student Complaints Procedure

The student complaints procedure seeks to provide an accessible, fair and straightforward system which enables you to raise concerns and which ensures an effective, timely and appropriate response.
You will not be disadvantaged because you have made a complaint in good faith.

11.4. Informal Procedure

In the event of you having a complaint about any aspect of your experience you should raise this in the first instance with the Head of Quality Assurance, your Course Director, the Registrar or an appropriate member of staff you feel comfortable with. It is anticipated that the vast majority of complaints will be resolved at the stage. We will aim to investigate and address your concern quickly and informally initially. You should normally expect to receive a written or verbal response within 5 working days.

11.5. Formal Procedure

If we are unable to resolve your complaint informally, you will be directed to make a formal complaint by following Ulster University's formal complaints procedure which can be found at:
https://www.ulster.ac.uk/quality/procedures/student-engagement/student-complaints-qahe#contact

Separate procedures exist for grievances relating to personal harassment or discrimination on sexual, religions, racial or other grounds.

11.6. DISCIPLINARY PROCEDURES

On occasions of general misconduct or vandalism, the disciplinary procedure should be instigated and dealt with. Should transgressions have implications for the programme, such as plagiarism, the Course Committee should refer the matter to an appropriate body. In all cases the other institution will be kept fully informed.

11.7. Appeals

The University is committed to providing students with the right to appeal, in appropriate circumstances, against a decision of a Board of Examiners. See the following website for the Student's Appeals process. https://www.ulster.ac.uk/student/exams-and-appeals/appeals

An appeal may be based either:

(a) on new information about extenuating circumstances which were not known to the Board when it made its original decision; or
(b) on a procedural or other irregularity.

Extenuating circumstances may be due to illness or domestic or personal difficulties. A procedural irregularity could be a change to published examination arrangements not notified to students in advance. These examples are illustrative only and evidence of other extenuating circumstances or procedural irregularities may be presented. There are matters which are not open to review through the appeals procedure. These include:

(i) challenges to the academic judgement of the examiners on your performance; or

(ii) complaints about the delivery or management of a programme after you have presented yourself for examination; you should raise such concerns through the University's complaints procedures at an earlier stage as soon as they arise.

Appeals are made to an Appeals Panel. An Appeals Panel cannot make academic judgements, that is, it cannot change your marks to enable an assessment to be passed or the classification of an award to be changed. Instead, if your appeal is upheld you will be permitted to complete, take, or repeat the assessment which, if you are successful, will enable you to proceed to the next stage of the programme or to complete it. If you are in the final stage of your programme you may be offered an Aegrotat degree. (This award may be offered, for instance, where a student has been ill over a considerable period of time and where the examiners are satisfied that the student would have qualified for the award otherwise).

11.8. Module Co-ordinator

Each module has a module co-ordinator who has overall responsibility for the module. The main responsibilities of the module co-ordinator are:

- Planning the module and changes to the module
- Co-ordinating and managing teaching on the module
- Co-ordinating the examining of students on the module in cases where a module is delivered by more than one member of staff, some responsibilities will be shared.

11.9. Studies Advisor

Each registered student on a taught course is assigned a Studies Advisor who provides guidance in matters relating to choice of modules, assessment and progress. Students are encouraged to talk to their tutors about their work and progress and to seek assistance, if required, with study or examination skills.

Studies Advisor will be pleased to provide students with information about the range of support available e.g. from Student Support, Careers Development Centre and, if requested, will make arrangements for students to seek specialist advice or help.

You will be given the name of your Studies Advisor during the first week of the semester. You should meet with your Studies Advisor at least once each semester. Your Studies Adviror will agree with you the frequency and format of these meetings.

11.10. External Examiner

The external examiner for the BSc Computing Systems course is Professor Simon Dobson.

11.11. Timetable

Your timetable is provided to you and available at the QAHE London site (Rosebery) and attendance at classes will be monitored.

11.12. Submission of Coursework

Arrangements for submission of Coursework will be outlined to you and you will be required to complete a course submission sheet. A receipt will be available. A submission sheet will be provided.

11.13. Staff-Student Consultative Committee

You will be required to nominate a class representative who will be responsible for representing your views on the Staff Student Consultative Committee. This committee is tasked with understanding your opinions and providing you with feedback on any course related issues you wish to raise as a group. Reports generated by the external examiner will be shared with you through this committee.

Your experience of the course and your learning are also fed through an Assessment of Teaching questionnaire which will be available regularly for each module. In year 3 a National Student Survey is provided linked to from the student portal.

11.14. Attendance

If you have extenuating circumstances for missing a deadline you should complete an EC1 form which can be found at: Policies & procedures | Ulster University Branch Campuses in the extenuating circumstances section or sought from Student Services.

The regulations for all courses at Ulster include a section on attendance requirements which indicates:

- Students are expected to attend all classes associated with the course and be punctual and regular in attendance.

- A student who has not been in attendance for more than three days through illness or other cause must notify immediately the Course Director. The student shall state the reasons for the absence and whether it is likely to be prolonged. Where the absence is for a period of more than five working days, and is caused by illness which may affect their studies, the student shall provide appropriate medical certification in accordance with the General Regulations for Students.

- Students who are absent without good cause for a substantial proportion of classes may be required to discontinue studies, in accordance with the General Regulations for Students.

Attendance will therefore be monitored on all modules across all years of study. Typically, this will take the form of a sign-in sheet at each class (although other methods such as login records etc may also be used, particularly on online modules). This sheet will then be returned to the Office where each student's attendance will be recorded electronically. Staff will then be able to periodically review a summary of

each student's attendance and take any necessary action, such as interviewing a student to discuss their attendance. QAHE also monitors attendance through the Attendance Office.

Attendance at meetings with personal tutors or other staff will also be recorded.

It is acknowledged that there may be times that due to personal circumstances, attendance is not possible. However, it is important that in such circumstances you advise your Course Director as soon as practical and notify attendance office.

Should you be contacted in relation to your attendance, it is important that you respond immediately and fully engage with the procedures. The School views the monitoring of attendance as a mechanism to help you maximise the benefit from your studies – it is not a "punishment".

11.15. Disability Services

Ulster University's Counselling and Guidance services offer advice to students with disabilities and have a Disability Awareness Officer who provides practical support. Any student who suffers from a disability or believes they have a disability which may affect their studies must notify the Welfare and Student Relations Department at QA Higher Education at the earliest opportunity.

11.16. Equal Opportunities

All staff of the Ulster University have a responsibility to ensure the effective implementation of the equal opportunities policies which also covers disability and to assist in the prevention of discrimination.

Additionally, the Ulster University have a policy on sexual, racial and religious harassment and each have appointed and trained a network of harassment advisors to ensure the effective implementation of the policy.

12. WELFARE AND STUDENT RELATIONS

The Welfare and Student Relations Department at QA Higher Education have considerable expertise and information in the areas of academic counseling, student support and financial support. All issues discussed are strictly personal and confidential.

13. COMMUNITY ENGAGEMENT AND EMPLOYABILITY

You will be introduced to Personal Development Planning and the use of the associated PACE tool specifically through the module on Study Skills & Professional Issues. The PACE tool is readily accessible from the portal and will allow you to gather evidence of the employability related skills you have acquired through your course

and other life experiences. This can then be used as a portfolio of salient evidence which you can present to potential employers. It will also prove valuable for your final year project.
It can be valuable to seek opportunity to undertake work experience particularly that which relates to your course. Opportunities to engage with industrial practitioners will be included on your course and you will be encouraged to build your experience.

Entrepreneurship and employability are important themes in your course. Skills related to entrepreneurship and employability are developed in your course and you will be encouraged to develop and record these.

Careers information gained be gained to gather advice with career planning and seek opportunities for you to develop your employability skills. There are Information Centres on campuses.

Services provided include:

- A comprehensive range of current career information resources.
- Access to graduate vacancies for permanent employment, placement, vacation and part-time work.
- Regular opportunities to meet employers and professional bodies at fairs, forums, presentations and interviews throughout the year.
- Accredited CPPD careers modules to help you find out more about career options and develop career management skills.
- *Access to high quality interactive careers resources on Ulster GradNav.*
- *Careers Connect – register for e- mails alerts on current careers events and job opportunities*

My Careers' Tab of the University portal http://portal.ulster.ac.uk
Other ways that you can get involved in University life, enjoy yourself and enhance your C.V. include…

- Students' representation
- Clubs and Societies
- Being a course representative
- Volunteering activities

14. CAREER SERVICE

QAHE Careers Service offers a wide range of activities and support to students at every step of their journey. Here are just some of the services on offer:

The service 1:1 appointments with professional career consultants covering guidance on CV/ cover letter/application writing, formulating your effective career plan and search strategy, skills analysis, interview training and bespoke mock interviews. You can speak to career consultants face to face or by email, telephone and skype;

- Access to a wide variety of printed and online careers resources including our online careers portal: QA Higher Education Careers Online;
- Mentoring opportunities and support with small business start-ups;
- Notifications of work experience and job opportunities;
- Programme of careers and employability workshops and employer-led events;
- Support in finding a placement or internship;
- Commercial awareness training;
- Psychometric and strength-based testing; and
- Help with any other careers-related issues you may have including further study and volunteering.

15. GRADUATE QUALITIES

Graduate Qualities - BSc Computing Systems – opportunities for gathering evidence to show achievement of Graduate Qualities

	Level 4	Level 5	Level 6
Subject-specific knowledge and skills informed by current research and professional /vocational practice.	Module learning outcomes Student skills review and target setting	Module learning outcomes Staff seminars Project Approval process	Module learning outcomes Project Professional Body engagement Bite-sized sessions with QA Corporate
Flexibility, creativity and an entrepreneurial approach to the resolution of problems.	Software Design approaches	Introduction to Databases Server-side Development Engagement in clubs and societies	Project Engineering Processes and Techniques
Self-confidence, global citizenship, ethical leadership and a commitment to life-wide learning, professionalism and employability.	Information Systems in Organisations Study Skills and Professional Issues Student representative roles	Engagement with sponsorship and volunteering Engagement in clubs and societies	Work with visiting speakers External engagement Project
Effective collaborative working, communication skills and the capacity for reflective practice, including the ability to give and receive feedback.	Work in module teams Programming in Practice	Computer Networking	External engagement Project Professional Body engagement

16. STUDENT SUPPORT

It is normal to have questions about your studies and University life, and there are a variety of places that you can get information and support. You are encouraged to make full use of them to help you with your learning in higher education.

Who to talk to:

- Studies Advisor
- Course Director
- Student Support

There are personal challenges in learning and living in the University environment. Student Support focus' on helping you to make the most of your time at University and to cope with any problems which might arise. We aim to offer support for all aspects of your personal and academic life while you are studying. Our services are available to **all students**. All of the services are confidential, provided in a supportive atmosphere and are staffed by well-qualified professionals.

Study Skills Support see Ulster skills+

Students' Union: http://www.uusu.org/

You are encouraged to make full use of support available to you, helping you with your learning in higher education.

17. LIBRARY FACILITIES

Use of on-line searching techniques allows users to access a wide range of bibliographical databases covering most subject areas. The Learning Resource Centres (LRC) at the University's campuses, provides access to a wide range of electronic information sources available from nationally networked databases and Internet services. Many of these sources are bibliographic databases providing citations and abstracts to periodical articles and conference proceedings, while others provide access to the full-text of articles, all of which have particular importance to distance learning students. These also may be accessed through the Library homepage, as can the catalogues of a large number of University Libraries. See www.ulster.ac.uk/library.

A catalogue of the entire library stock can be accessed from any computer connected to the Internet and students are entitled to borrow most book material held on any other campus. It is also possible to access books and other materials not held by the University from the British Library through the Inter-Library Loans Service. Borrowing facilities and use of electronic information resources is restricted to registered students and staff of the University. Remote access is available for checking loans information, placing book reservations and for renewals. To encourage the prompt return of material, overdue items will incur a fine.

As well as printed material, the Library provides access to information in a range of different formats including videotapes, slides, microfilm and multi-media packs. The Library also provides access to a wide range of electronic information sources

available from nationally networked databases and Internet services. Many of these sources are bibliographic databases providing citations and abstracts to periodical articles, books and conference papers, while a growing number provide access to the full-text of journal articles.

19. DOCUMENT MANAGEMENT

Disclaimer
Details of the course/subject* are set out in this Handbook. The University will use all reasonable endeavours to deliver the course/subject* in accordance with this description. However, the University does not provide education on a commercial basis and is largely dependent on public and charitable funds, which the University has to manage in a way which is efficient and cost-effective, in the context of the provision of a diverse range of programmes to a large number of students. The University therefore reserves the right to make variations in the content or method of delivery or assessment or other changes if such action is reasonably considered necessary by the University in the context of its wider purposes.

Retention of Information

You are advised that you should retain this Handbook and associated module handbooks for future reference. You may be asked to provide documentary evidence of modules taken and their content by potential employers or in connection with an application to undertake further study. The University can provide such details from its records, but will make a charge to cover the costs involved in conducting searches and supplying information.
